

Summer Safety '09

What's the Deal?

The summer season brings the potential for increased risk. Why?

- More people on the road
- More water recreation
- More sporting activities
- More partying

Example of Heavy Partying

What Do the Stats Mean?

- Car and truck deaths were significantly **lower** last year
- Motorcycle deaths were **MUCH higher** last year
- Drowning deaths were down
- Pedestrian and off-duty recreation fatalities were slightly up

The Good News!

- With only 1 drowning last year, the Navy and Marine Corps are doing a much better job of promoting water safety

Surfing legend Greg Brady and his lucky tiki statue!

How to Enjoy Summer 2009

- Spend time off with family and friends
- Get trained for high risk activities. If you ride a motorcycle, attend a safety course. If you're jumping out of a plane, wear a parachute.
- Risk management is mostly common sense.

Alcohol and Risk Don't Mix

- According to the Centers for Disease Control, Alcohol:
 - Affects every organ in the body
 - Should not be consumed by anyone who plans to drive, operate machinery, or take part in activities that require **attention**, **skill**, or **coordination**. (Most summer activities require one or more of the three.)
